## Part 2 — Fork merge report

### Conflicts resolved

| File              | Resolution                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| backend/loader.py | Upstream refactored the per-component dtype-detection blocks (Qwen2.5, Gemma2, Mistral3, Qwen3, T5XXL, UNet) into a single shared <code>_detect_dtype()</code> helper, dropping the old <code>nf4/fp4</code> branches (bitsandbytes was already removed) and consolidating logging. Our CUSTOM (Forge Neo) Qwen3 <code>fp8-upcast</code> branch lived inside the old duplicated per-branch <code>if/elif</code> chain that upstream deleted. Resolved by keeping upstream's shared <code>_detect_dtype()</code> call, then adding a Qwen3-specific override immediately after it: when <code>quant_config</code> is <code>None</code> and <code>state_dict_dtype</code> is <code>float8_e4m3fn/e5m2</code> , reset <code>storage_dtype</code> back to the configured <code>text_encoder_dtype</code> and upcast the <code>fp8</code> weights in-place, exactly as before (same log message), just re-anchored to the new helper-based structure instead of a duplicated inline chain. |

### Custom work verified

| Check                                                                                                                                                                                                                                                                       | Status | Detail                                                                     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|----------------------------------------------------------------------------|
| canvas.js custom markers (8/8: <code>forgeCanvasInstances</code> , <code>drawWithStamps</code> , <code>_scatterJitterCache</code> , <code>no_shapes</code> , <code>scribbleRotation</code> , <code>scribbleHeight</code> , <code>MAX_HISTORY</code> , <code>_abort</code> ) | PASS   | all FOUND; file untouched by this merge, 1988 lines (vs upstream ~750-857) |

| Check                                                                   | Status | Detail                                                                                                                                                                                 |
|-------------------------------------------------------------------------|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| backend/loader.py Qwen3 fp8 upcast                                      | PASS   | hand-merged into upstream's new _detect_dtype() structure, CUSTOM marker preserved, py_compile clean                                                                                   |
| modules_forge/utils.py resolution guard                                 | PASS   | CUSTOM (Forge Neo) marker present, untouched by this merge                                                                                                                             |
| modules/generation_parameters_copypaste.py compat shim                  | PASS   | CUSTOM (Forge Neo) marker present, untouched by this merge                                                                                                                             |
| ControlNet tabbed batch UI (Single Image / Batch Folder / Batch Upload) | PASS   | all 3 gr.Tab labels present in lib_controlnet/controlnet_ui/controlnet_ui_group.py, untouched by this merge                                                                            |
| No LTX-Video wiring                                                     | PASS   | precise grep (excluding backend/huggingface and CLAUDE*.md) empty                                                                                                                      |
| No resurrected custom ERNIE files                                       | PASS   | git ls-files grep for ernie_image/ernie_engine empty; detection.py diff in this range was unrelated config-key cleanup (image_size/legacy/use_temporal_* removal), no ERNIE references |

| Notes      | Krea 2 GGUF (sickOllieKrea2GGUF_v10) txt2img 512x512, 8 steps, seed 777 via /sdapi/v1/txt2img -> HTTP 200, valid image returned (388KB base64). Exercises the Qwen3-VL-4B (Krea 2) text-encoder load path that the hand-merged loader.py code touches. 0 tracebacks in tmp/run.log. |

## Notes

- Small update: only 7 untagged commits past tag 2.29, no new tag reached.
- Only 1 conflicting file (backend/loader.py), matching the CLAUDE.md-documented recurring-conflict list.
- modules\_forge/packages/huggingface\_guess/detection.py changed (unet\_config dict cleanup: dropped unused image\_size/legacy/use\_temporal\_resblock/use\_temporal\_attention keys) but auto-merged cleanly, no ERNIE involvement.
- New file javascript/promptDebounce.js added by upstream (prompt-input debounce), no conflict.
- CivitAI Browser Neo extension was observed starting its Aria2 RPC in the live-test log despite CLAUDE.md marking it DISABLED 2026-09-02 -- unrelated to this merge, not investigated further, flagged for the user's awareness only.
