Part 2 — Fork merge report

Conflicts resolved

File	Resolution
README.md	Kept ours (Silk Custom readme).

File	Resolution
modules/processing.py	Line-ending artifact (ours=LF, upstream=CRLF) caused whole-file conflict. Took our HEAD version. Applied 3 real upstream changes: (1) added self.width, self.height = image.size after img2img resize, (2) removed stale firstpass_use_distilled_cfg_scale assignment, (3) 'Use same checkpoint' quote style. Preserved CUSTOM guards: Wan safe seed/prompt indexing, 0.60 denoising_strength defaults, hr_additional_modules None-safe walrus guard.
extensions-builtin/sd_forge_controlnet/scripts/controlnet.py	Kept our custom batch-iteration tensor slicing (control_cond_full) AND added upstream's new 'if params.model is None: return' guard before it.

Custom work verified

Check	Status	Detail
canvas.js: forgeCanvasInstances	PASS	grep FOUND
canvas.js: drawWithStamps	PASS	grep FOUND
canvas.js: _scatterJitterCache	PASS	grep FOUND
canvas.js: no_shapes	PASS	grep FOUND
canvas.js: scribbleRotation	PASS	grep FOUND
canvas.js: scribbleHeight	PASS	grep FOUND
canvas.js: MAX_HISTORY	PASS	grep FOUND
canvas.js: _abort	PASS	grep FOUND
canvas.js: line count >= 1750	PASS	1988 lines
LTX-Video wiring absent	PASS	precise grep empty
No custom ERNIE files (ernie_image/ernie_engine)	PASS	grep empty
JS syntax check (1 file)	PASS	javascript/hints.js OK
Python syntax check (21 files)	PASS	all OK via py_compile
processing.py: Wan safe-indexing preserved	PASS	seed_idx/prompt_idx guards intact
processing.py: 0.60 denoising_strength preserved	PASS	both txt2img and img2img dataclass defaults
processing.py: CUSTOM hr_modules guard preserved	PASS	walrus + None check intact, comment preserved

Dependencies installed

- comfy-kitchen==0.2.35

Live test-drive

Launched	yes
Generation	PASS
Tracebacks	0
Notes	POST /sdapi/v1/txt2img: 512x512, 8 steps, cfg 1, seed 777, model sickOllieKrea2GGUF_v10 (Krea 2 GGUF). Returned 359 KB PNG, HTTP 200. Generation was idle (prior generation had just completed before test was sent).

Notes

- Tag 2.29.1 is new in this range — crosses a minor version boundary.
- Notable upstream content: ControlLLLite x MultiDiffusion integration (b469e221), cnet changes (41359cd4), res/resize fixes (38bffce2, 6266f6a6), rope changes (6f616e8d), dtype work (23332996), metadata (3baffa8b).

- controlnet.py conflict: our custom batch-iteration tensor slicing (control_cond_full) was not in upstream; kept it alongside upstream's new model-is-None guard.
- processing.py: upstream removed Wan safe-indexing (seed_idx/prompt_idx); kept per CLAUDE.md. Upstream reverted denoising to 0.75; kept our 0.60. Upstream changed hr_modules guard to their TypeError-prone version; kept our CUSTOM guard.
- img2img receives new upstream fix: self.width, self.height = image.size after resize (ensures p dimensions stay in sync with actual resized image).
